How the Web is changing the world

Professor Susan Halford tell us short history web. This history was combination of social, economic, political and technical processes.

Professor Susan Halford

Sociology, Director Web Science Institute

Les Carr says about nature Web. The Web was a solution to the unusual problems of a highly collaborative, international research centre in the 1980s.

Professor Les Carr
Computer Science, Director Web Science Centre for Doctoral Training

Ted Nelson. It one among the first who started to work on the creation of the Web. his system was called Xanadu
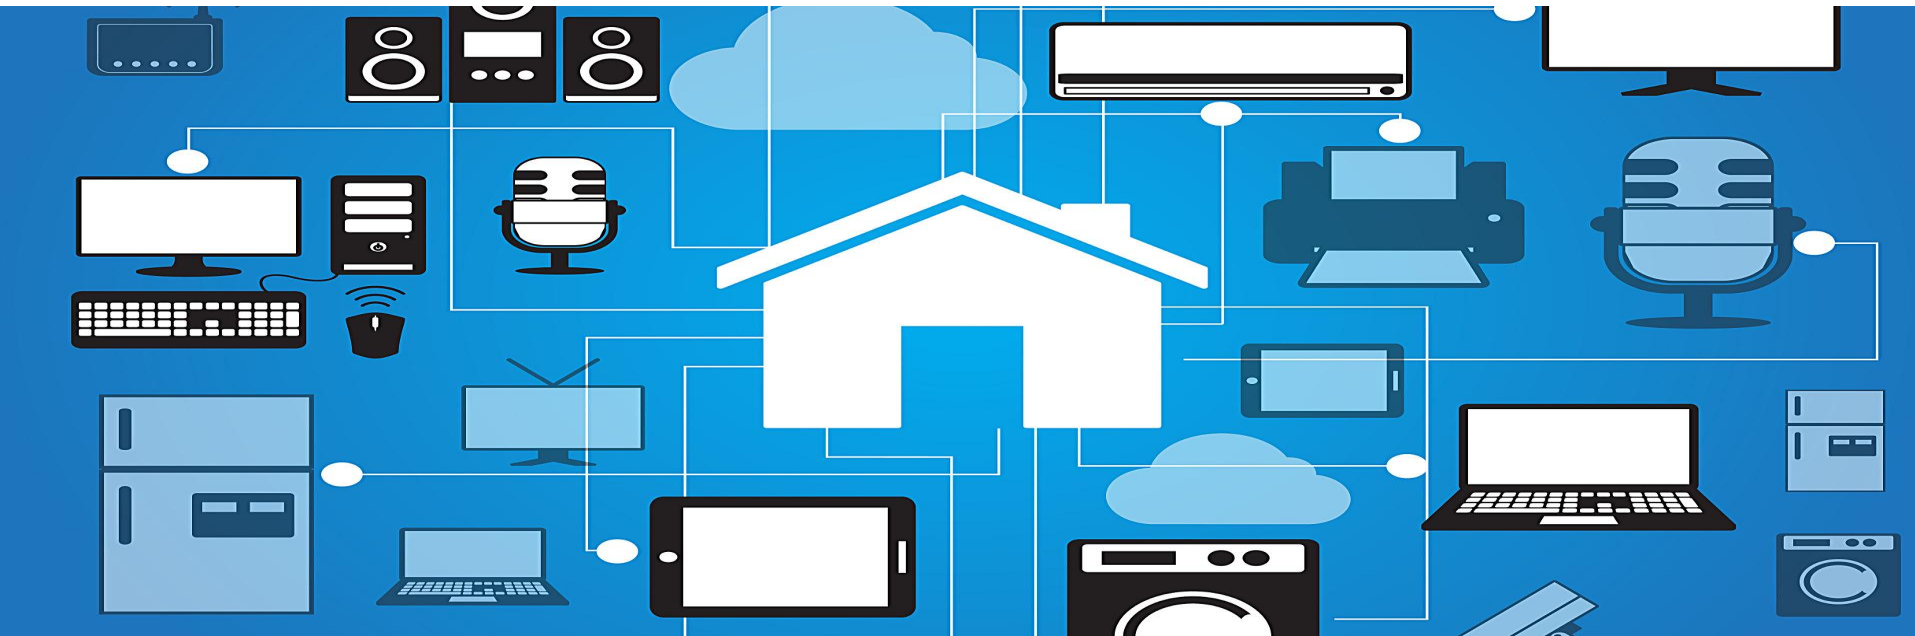

Thanks to web we can to learn different language.

We can choose what to use online services. Example Twitter, Instagram, Facebook,PayPal.

With the development of the Web, there is a need in the creation of gadgets for more convenient use of the Internet. Now it is different smartphones, tablets, Internet things.

In comparison with the last time, it became easier to communicate their ideas to a large audience .

Due to the existence of the web Millions of people have jobs and are in it to realize their ideas. It professions such as programmers managers,designer developers, the testers, engineering in all fields of science

Today it is very important to study computer science because it is our future
