Internet Service Providers (ISP)

- Internet connections (“Broadband”):
 - 1) satellite
 - 2) cable
 - 3) fiber optic service (FiOS)
 - 4) DSL (Digital Subscriber Line)

“ Broadband ”

Connections umbrellas all types of Internet connections. This covers satellite , cable fiberoptic service (FiOS) and DSL.

Digital Subscriber Line (DSL)

- DSL  ADSL (Asymmetric DSL)
-  SDSL (Symmetric DSL)
- Benefits :
- ADSL – more affordable
provides faster down load speeds
- SDSL – fast down load and unload speeds

Cable Broadband

- Benefits :
- the speed and quality of service does not rely on the distance.
 - Cable broadband is much quicker than satellite and DSL
 - More accessible, as compared to fiber broadband.

Satellite

- Benefits : - covers any places
