- Practice task

Introduction to the Course

HTML/CSS/JavaScript

- HTML – Hypertext Markup Language
- CSS – Cascading Style Sheets
- JavaScript – Programming Language

How do browsers work

Detailed article: <http://www.html5rocks.com/ru/tutorials/internals/howbrowserswork/>

Project – Personal Website

The screenshot shows a web browser window displaying a personal website for Bill Gates. The browser's address bar shows the URL <https://www.gatesnotes.com/globalpages/bio>. The website header includes the logo 'gatesnotes' with the tagline 'The blog of Bill Gates', navigation links for 'Personal', 'Books', and 'Energy', a search icon, and a 'Sign In' button. The main content area has a yellow background and features a large portrait of Bill Gates with his arms crossed. To the left of the portrait, the text reads 'About Bill' in large bold letters. Below this, it lists: 'Married to: Melinda French Gates', 'Children: Three', and 'Career highlights: Microsoft, Bill & Melinda Gates Foundation'. To the right of the portrait is a vertical timeline with three entries: '1955— Born Seattle, WA.' with a childhood photo; '1967 Enrolled at Lakeside School. First used computer.' with a photo of him at a computer; and '1968 Began programming with Paul Allen in the computer center.' with a photo of him and Paul Allen. Below the portrait, there is a diagram of a triangle with vertices labeled 'K', 'H', and 'T' and the text 'ΦΗΓ. 3.'. At the bottom left, a paragraph of text describes Bill Gates as a technologist, business leader, and philanthropist, mentioning his upbringing in Seattle, his early interest in computers, his time at Harvard, and his partnership with Paul Allen to start Microsoft. At the bottom right, there is a photo of a young Bill Gates sitting at a desk with a computer monitor. The browser window also shows a tab for 'Bio | Bill Gates' and a user profile 'Vyacheslav' in the top right corner.

Tools

Mockups - NinjaMock

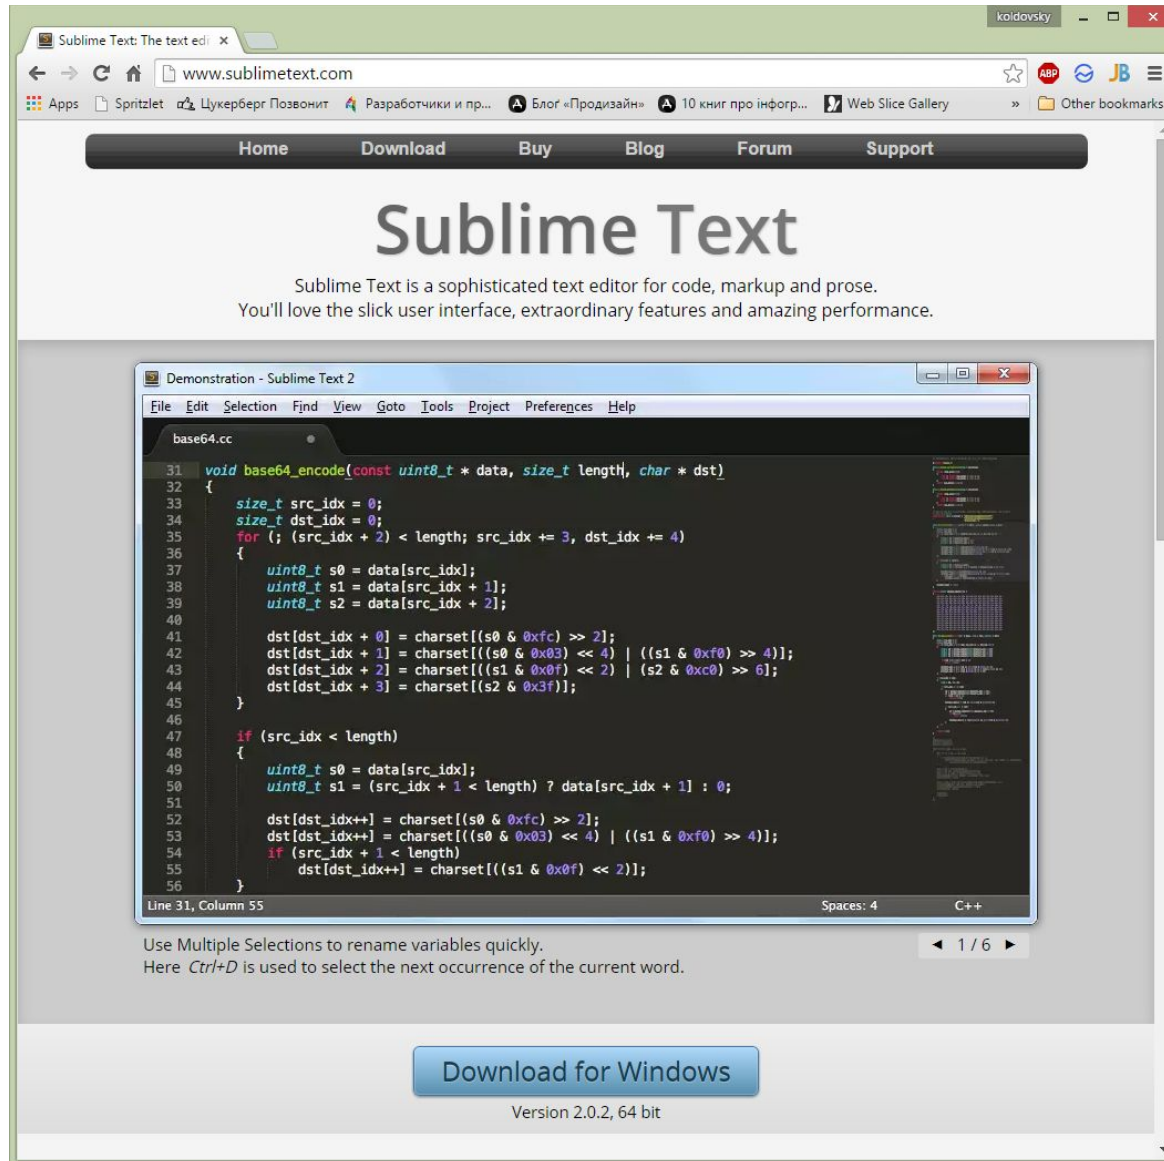

The screenshot displays the NinjaMock web application interface. The browser address bar shows the URL <https://ninjamock.com/Designer/Workplace/2469765/Page1>. The application title is "Project 'Weather Forecast'".

The interface is divided into several sections:

- Elements Panel (Left):** Contains a search bar "Search element (F3)..." and a "Basic" category with elements like "Label" and "Link". Below this are "Heading 1", "Heading 2", and "Heading 3" options, followed by a "Logo" element and a list of items (Item 1, Sub-item 1, Item 2, Sub-item 2).
- Properties Panel (Right):** Contains a search bar "Search property (Shift+F3)..." and sections for "Application" (Default font family: TomsHandw..., Sketchy lines: checked), "Page" (Page name: Page 1, Device: Browser, Background: X, Master page: X < None, Screen orientation: Portrait, Page Status: In progress, Width: 1024, Height: 768).
- Central Canvas:** Shows a hand-drawn mockup of a weather forecast. The text "Weather Forecast" is at the top. Below it is a rectangular frame containing a sun, mountains, and a lake. Underneath the frame, the text "Condition, Temp" and "City" is written. The canvas has a toolbar on the left and a zoom control at the bottom right.
- Pages Panel (Bottom):** Shows a "Default group" with a "Page 1" thumbnail.

At the bottom of the interface, there is a "Saved." status indicator, a "You are working online" message, and "feedback" and "help!" icons.

Sublime Text

The screenshot shows the Sublime Text website in a browser window. The browser's address bar displays 'www.sublimetext.com'. The website's navigation menu includes 'Home', 'Download', 'Buy', 'Blog', 'Forum', and 'Support'. The main heading is 'Sublime Text', followed by the text: 'Sublime Text is a sophisticated text editor for code, markup and prose. You'll love the slick user interface, extraordinary features and amazing performance.'

A demonstration window titled 'Demonstration - Sublime Text 2' is open, showing a C++ code editor with the following code:

```
base64.cc
31 void base64_encode(const uint8_t * data, size_t length, char * dst)
32 {
33     size_t src_idx = 0;
34     size_t dst_idx = 0;
35     for (; (src_idx + 2) < length; src_idx += 3, dst_idx += 4)
36     {
37         uint8_t s0 = data[src_idx];
38         uint8_t s1 = data[src_idx + 1];
39         uint8_t s2 = data[src_idx + 2];
40
41         dst[dst_idx + 0] = charset[(s0 & 0xfc) >> 2];
42         dst[dst_idx + 1] = charset[((s0 & 0x03) << 4) | ((s1 & 0xf0) >> 4)];
43         dst[dst_idx + 2] = charset[((s1 & 0x0f) << 2) | (s2 & 0xc0) >> 6];
44         dst[dst_idx + 3] = charset[(s2 & 0x3f)];
45     }
46
47     if (src_idx < length)
48     {
49         uint8_t s0 = data[src_idx];
50         uint8_t s1 = (src_idx + 1 < length) ? data[src_idx + 1] : 0;
51
52         dst[dst_idx++] = charset[(s0 & 0xfc) >> 2];
53         dst[dst_idx++] = charset[((s0 & 0x03) << 4) | ((s1 & 0xf0) >> 4)];
54         if (src_idx + 1 < length)
55             dst[dst_idx++] = charset[((s1 & 0x0f) << 2)];
56     }
57 }
```

Below the code editor, there is a note: 'Use Multiple Selections to rename variables quickly. Here *Ctrl+D* is used to select the next occurrence of the current word.' A navigation bar shows '1 / 6'.

A prominent blue button labeled 'Download for Windows' is centered at the bottom, with the text 'Version 2.0.2, 64 bit' underneath it.

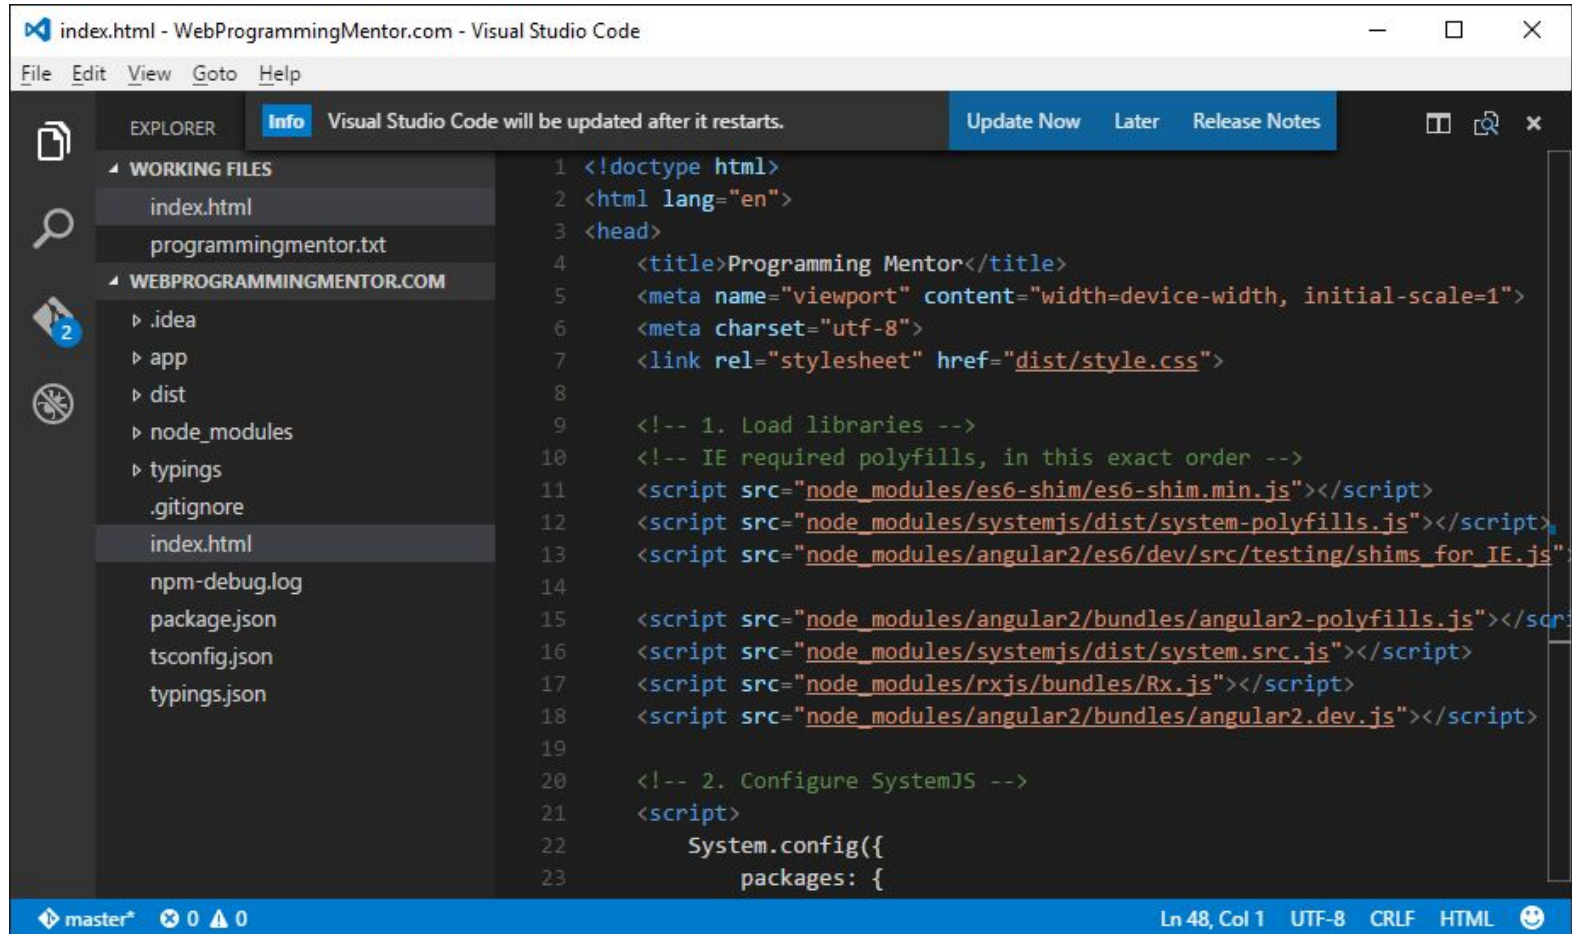

Brackets

The image shows a screenshot of the Brackets website in a browser window. The browser's address bar shows 'brackets.io'. The website's navigation menu includes 'Brackets', 'Contribute', 'API Docs', 'Blog', and 'Support'. The main content area features the text 'A modern, open source text editor that understands web design.' Below this is a blue button that says 'Download Brackets 1.3 + Extract (Preview) by Adobe'. Underneath the button are two links: 'Download Brackets without Extract' and 'Other Downloads'.

Below the website screenshot is a screenshot of the Brackets IDE interface. The IDE shows a file explorer on the left with a tree view of files and folders. The main editor area displays CSS code for a 'font-family' property. A tooltip is visible over the code, listing various font families. A blue arrow points from the text 'You can use Code Hints to extract PSD Layers' to the tooltip. The IDE also shows a preview of a webpage with the text 'Brackets is fun to hack on and easy to contribute to.' and a grid of small images.

With focused visual tools and preprocessor support, Brackets is a modern text editor that makes it easy to design in the browser. Try Creative Cloud Extract (preview) for Brackets.

MS Visual Studio Code

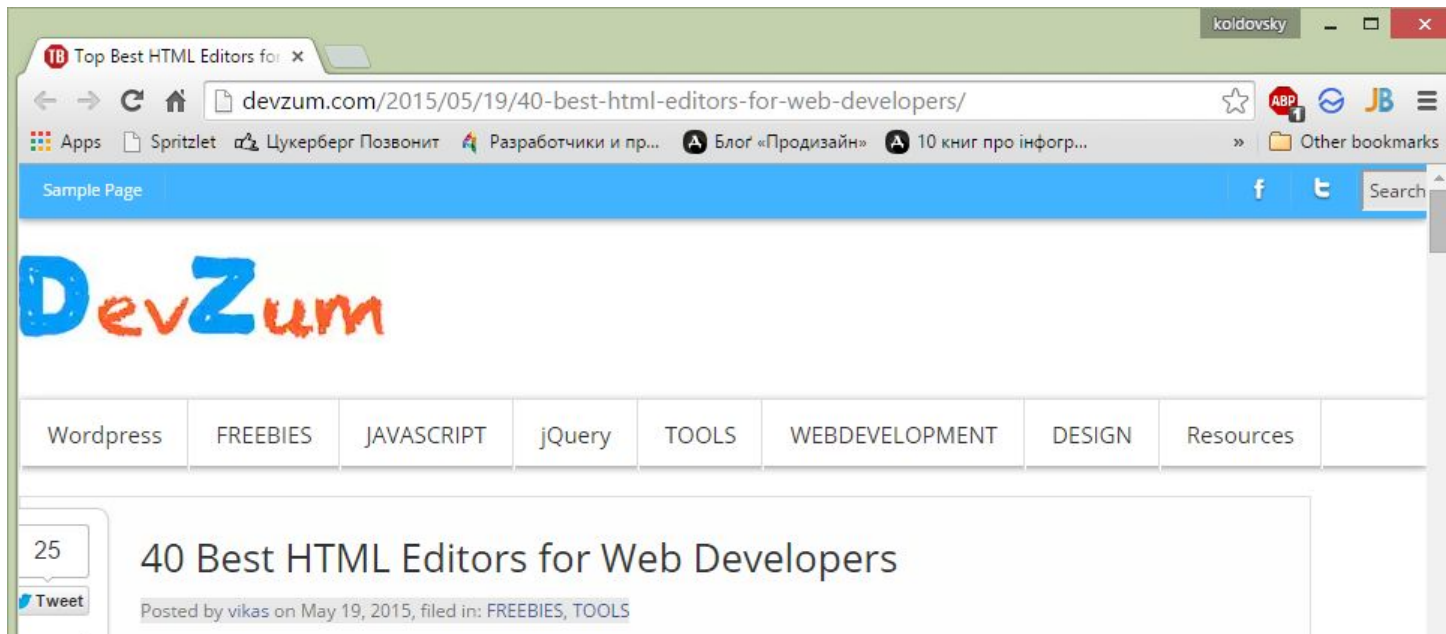

The screenshot shows the Visual Studio Code interface with the Explorer sidebar on the left and the Code Editor in the center. The Explorer sidebar displays the project structure for 'WEBPROGRAMMINGMENTOR.COM', including folders like '.idea', 'app', 'dist', 'node_modules', and 'typings', and files like 'index.html', 'npm-debug.log', 'package.json', 'tsconfig.json', and 'typings.json'. The Code Editor displays the content of 'index.html', which is an HTML document with a head section containing meta tags for viewport and charset, and a link to a stylesheet. The body section contains several script tags for loading libraries and polyfills, and a SystemJS configuration block.

```
1 <!doctype html>
2 <html lang="en">
3 <head>
4   <title>Programming Mentor</title>
5   <meta name="viewport" content="width=device-width, initial-scale=1">
6   <meta charset="utf-8">
7   <link rel="stylesheet" href="dist/style.css">
8
9   <!-- 1. Load libraries -->
10  <!-- IE required polyfills, in this exact order -->
11  <script src="node_modules/es6-shim/es6-shim.min.js"></script>
12  <script src="node_modules/systemjs/dist/system-polyfills.js"></script>
13  <script src="node_modules/angular2/es6/dev/src/testing/shims_for_IE.js">
14
15  <script src="node_modules/angular2/bundles/angular2-polyfills.js"></scr
16  <script src="node_modules/systemjs/dist/system.src.js"></script>
17  <script src="node_modules/rxjs/bundles/Rx.js"></script>
18  <script src="node_modules/angular2/bundles/angular2.dev.js"></script>
19
20  <!-- 2. Configure SystemJS -->
21  <script>
22    System.config({
23      packages: {
```

And more...

Cloud 9

The screenshot displays the Cloud9 IDE interface. The top browser window shows the URL `https://ide.c9.io/koldovsky1/weather_sample`. The main editor area is open to `index.html`, containing the following HTML code:

```
1 <!DOCTYPE html>
2 <html>
3   <head>
4     <meta charset="utf-8" />
5     <title>Сайт прогнозу погоди</title>
6
7     <!-- The stylesheet -->
8     <link rel="stylesheet" href="assets/css/styles.css" />
9
10    <!-- Google Fonts -->
11
```

The terminal window at the bottom shows the following commands and output:

```
basl x | Imm x | apa | [New | asse x | inde | inde | asse x | + | x

http://w3schools.com

The screenshot shows the W3Schools website in a browser window. The browser's address bar displays 'www.w3schools.com'. The website's header features the 'w3schools.com' logo and the tagline 'THE WORLD'S LARGEST WEB DEVELOPER SITE'. A green navigation bar contains links for 'TUTORIALS', 'REFERENCES', and 'EXAMPLES', along with search and home icons. On the left, a sidebar lists various topics: HTML/CSS, JavaScript, and HTML Graphics, each with sub-links. The main content area is titled 'HTML' and includes the text 'The language for building web pages.' Below this are two buttons: 'LEARN HTML' and 'HTML REFERENCE'. To the right, an 'HTML Example' box contains a code snippet for a basic HTML document structure. At the bottom of the page, the text 'CSS Example:' is visible, and the 'CSS' logo is partially shown.

HTML 5 NEW TAG

TAG NOT SUPPORTED IN HTML 5

| | |
|---------------------------------|--|
| <code><!...--></code> | Define a comment |
| <code><!DOCTYPE></code> | Defines the document type |
| <code><a></code> | Defines a hyperlink
href, hreflang, media, ping, rel, target, type |
| <code><abbr></code> | Defines an abbreviation |
| <code><acronym></code> | Used to define an embedded acronyms |
| <code><address></code> | Defines an address element |
| <code><applet></code> | Used to define an embedded applet |
| <code><area></code> | Defines an area inside an image map
alt, coords, href, hreflang, media, ping, rel, shape, target, type |
| <code><article></code> | Defines an article
cite, pdate |
| <code><aside></code> | Defines content aside from the page content |
| <code><audio></code> | Defines sound content
autobuffer, autoplay, controls, src |
| <code></code> | Defines bold text |
| <code><base></code> | Defines a base URL for all the links in a page
href, target |
| <code><basefont></code> | Used to define a default font-color, font-size, or font-family for all the document |
| <code><bdo></code> | Defines the direction of text display
dir |
| <code><big></code> | Used to make text bigger |
| <code><blockquote></code> | Defines a long quotation
cite |
| <code><body></code> | Defines the body element |
| <code>
</code> | Inserts a single line break |
| <code><button></code> | Defines a push button
autofocus, disabled, form, formaction, formenctype, formmethod, formnovalidate, formtarget, name, type, value |
| <code><canvas></code> | Defines graphics
height, width |
| <code><caption></code> | Defines a table caption |
| <code><center></code> | Used to center align text and content |
| <code><cite></code> | Defines a citation |
| <code><code></code> | Defines computer code text
autobuffer, autoplay, controls, src |
| <code><col></code> | Defines attributes for table columns |
| <code><colgroup></code> | Defines groups of table columns
span |
| <code><command></code> | Defines a command button
checked, disabled, icon, label, radiogroup, type |

| | |
|---------------------------------------|--|
| <code><datalist></code> | Defines a dropdown list |
| <code><dd></code> | Defines a definition description |
| <code></code> | Defines deleted text
cite, datetime |
| <code><details></code> | Defines details of an element
open |
| <code><dialog></code> | Defines a dialog (conversation) |
| <code><dfn></code> | Defines a definition term |
| <code><dir></code> | Used to define a directory list |
| <code><div></code> | Defines a section in a document |
| <code><dl></code> | Defines a definition list |
| <code><dt></code> | Defines a definition term |
| <code></code> | Defines emphasized text |
| <code><embed></code> | Defines external interactive content or plugin
height, src, type, width |
| <code><fieldset></code> | Defines a fieldset
disabled, form, name |
| <code><figure></code> | Defines a group of media content, and their caption |
| <code></code> | Used to define font face, font size, and font color of text |
| <code><footer></code> | Defines a footer for a section or page |
| <code><form></code> | Defines a form
accept-charset, action, autocomplete, enctype, method, name, novalidate, target |
| <code><frame></code> | Used to define one particular window (frame) within a frameset |
| <code><frameset></code> | Used to define a frameset, which organized multiple windows (frames) |
| <code><h1> to <h6></code> | Defines header 1 to header 6 |
| <code><head></code> | Defines information about the document |
| <code><header></code> | Defines a header for a section or page |
| <code><hgroup></code> | Defines information about a section in a document |
| <code><hr></code> | Defines a horizontal rule |
| <code><html></code> | Defines an html document
manifest, xmlns |
| <code><i></code> | Defines italic text |
| <code><iframe></code> | Defines an inline sub window
height, name, sandbox, seamless, src, width |
| <code></code> | Defines an image
alt, src, height, ismap, usemap, width |
| <code><input></code> | Defines an input field
accept, alt, autocomplete, autofocus, checked, disabled, form, formaction, formenctype, formmethod, formnovalidate, formtarget, height, list, max, maxlength, min, multiple, name, pattern, placeholder, readonly, required, size, src, step, type, value, width |

| | |
|--|---|
| <code><ins></code> | Defines inserted text
cite, datetime |
| <code><keygen></code> | Defines a generated key in a form
autofocus, challenge, disabled, form, keytype, name |
| <code><kbd></code> | Defines keyboard text |
| <code><label></code> | Defines an inline sub window
for, form |
| <code><legend></code> | Defines a title in a fieldset |
| <code></code> | Defines a list item
value |
| <code><link></code> | Defines a resource reference
href, hreflang, media, rel, sizes, type |
| <code><map></code> | Defines an image map
name |
| <code><mark></code> | Defines marked text |
| <code><menu></code> | Defines a menu list
label, type |
| <code><meta></code> | Defines meta information
charset, content, http-equiv, name |
| <code><meter></code> | Defines measurement within a predefined range
high, low, max, min, optimum, value |
| <code><nav></code> | Defines navigation links |
| <code><noframes></code> | Used to display text for browsers that do not handle frames |
| <code><noscript></code> | Defines a noscript section |
| <code><object></code> | Defines an embedded object
data, form, height, name, type, usemap, width |
| <code></code> | Defines an ordered list
reversed, start |
| <code><optgroup></code> | Defines an option group
label, disabled |
| <code><option></code> | Defines an option in a drop-down list
disabled, label, selected, value |
| <code><output></code> | Defines some types of output
for, form, name |
| <code><p></code> | Defines a paragraph |
| <code><param></code> | Defines a parameter for an object
name, value |
| <code><pre></code> | Defines preformatted text |
| <code><progress></code> | Defines progress of a task of any kind
max, value |
| <code><q></code> | Defines a short quotation
cite |
| <code><rp></code> | Used in ruby annotations to define what to show browsers that do not support the ruby element |
| <code><rt></code> | Defines explanation to ruby annotations |
| <code><ruby></code> | Defines ruby annotations |
| <code><s>, <strike></code> | Used to define strikethrough text. |

| | |
|---|--|
| <code><samp></code> | Defines sample computer code |
| <code><script></code> | Defines a definition list
async, type, charset, defer, src |
| <code><section></code> | Defines a section
cite |
| <code><select></code> | Defines a selectable list
autofocus, disabled, form, multiple, name, size |
| <code><small></code> | Defines small text |
| <code><source></code> | Defines media resources
media, src, type |
| <code></code> | Defines a section in a document |
| <code></code> | Defines strong text |
| <code><style></code> | Defines a style definition
type, media, scoped |
| <code><sub>, <sup></code> | Defines sub/super-scripted text |
| <code><table></code> | Defines a table
summary |
| <code><tbody></code> | Defines a table body
summary |
| <code><td></code> | Defines a table cell
colspan, headers, rowspan |
| <code><textarea></code> | Defines a text area
autofocus, cols, disabled, form, maxlength, name, placeholder, readonly, required, rows, wrap |
| <code><tfoot>, <thead></code> | Defines a table footer / head |
| <code><th></code> | Defines a table header
colspan, headers, rowspan, scope |
| <code><time></code> | Defines a date/tim
datetime |
| <code><title></code> | Defines the document title |
| <code><tr></code> | Defines a table row
datetime |
| <code><tt></code> | Used to define teletype text |
| <code><u></code> | Used to define underlined text |
| <code></code> | Defines an unordered list |
| <code><var></code> | Defines a variable |
| <code><video></code> | Defines a video
autobuffer, autoplay, controls, height, loop, src, width |
