

**New trend: technological
dresses**

Laushkina Anastasiya

In the age of high-tech fashion designers skillfully
combine special effects and fashion
One of the last it-trends – technological dresses

Dress is certainly not a lamp

**But it is able to cover unless you lazy to sew it over
ten thousand LEDs, as did Francesca Rosella and
Ryan Genz**

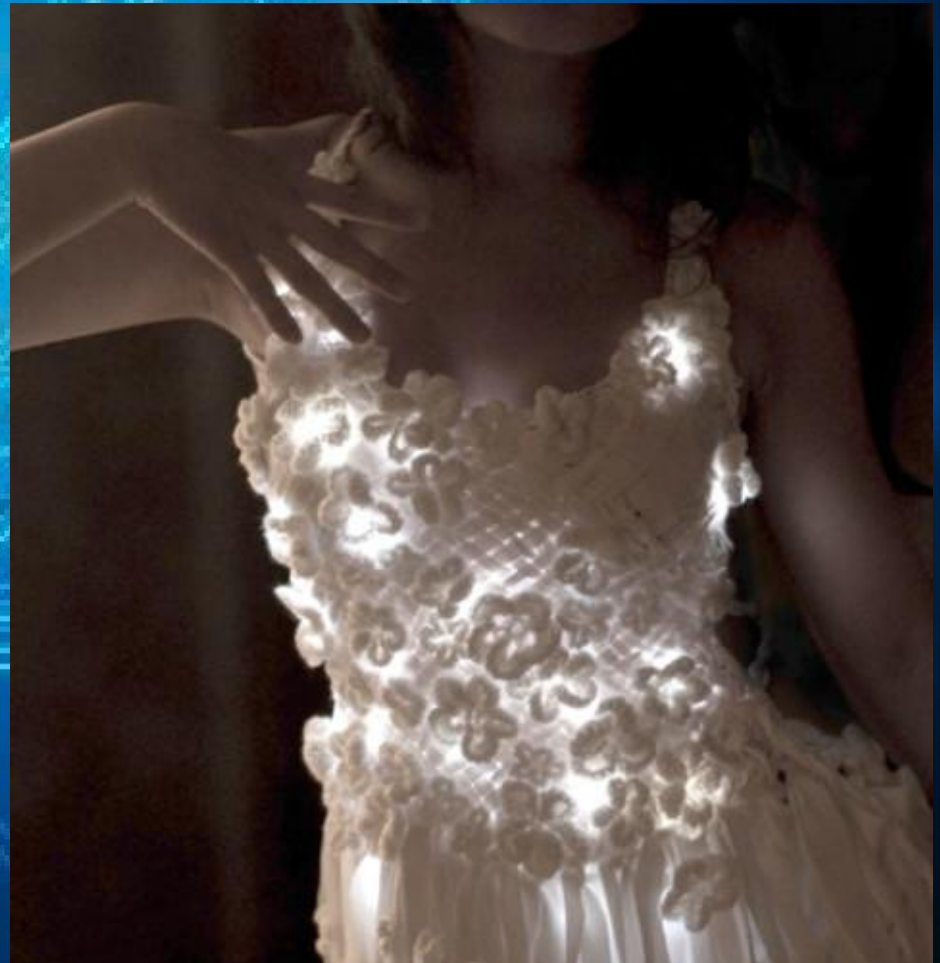

Their unique futuristic dress named to honor the goddess Aurora dawn. It is also decorated with hundreds of Swarovski crystals

**If you are inspired by high-tech, not neglect them
- you will be able to make for yourself unusual
luminous Christmas dress or suit**

**Vega Wong advise to use pure and plain materials.
Better to cover LEDs a few fabric layers,
preferably silk so that light scatters especially
effectively**

If you are not able to purchase 10,000 LEDs, do not worry - even 10 LEDs can turn an ordinary dress to elegant. As battery use lightweight and slim battery for iPod, charging will last for a few hours. Even easier to use LED strip, and in different parts of the dress sew usual "finger" batteries

And if you still want to finally slay others, you can add a pair of LEDs in your shoes - and everyone's attention is provided to you for the whole evening

Shine everywhere and always
