

# Wild animals of Russia

The diversity of natural areas, as in Russia, as well as a large number of nature reserves and attention to wildlife helps to survive and develop populations of many unique animals. Let's take a closer look at the most interesting of them.

# Siberian tiger

- Where does it live?

The Siberian tiger lives in Eastern Russia (Primorye and Khabarovsk territories) in birch forests and in mountain river basins.

- How dangerous is Siberian tiger?

Of course, like any large predators, it is dangerous. But in Primorye, the population density is low and tigers themselves avoid people. There has never been a case when the Amur tiger caused harm to someone's life: it only attacks people when they provoke it. However, if the hunting is very bad, tigers can steal livestock.

# Siberian tiger

- How can you protect yourself?

A tiger attacking at high speed can only be stopped by a shot. But then remember that the tiger's life is protected by law and you will have to prove the need for self-defense. Make a shot in the forehead, in the mouth, on the jump-in the neck, to stop the beast immediately.

Do not run after a wounded tiger, otherwise you will be disabled for life or die.

If the tiger knocked you down and didn't kill you at the first moment, lie down and don't fight back. Usually the survivors were those who lay still and screamed.

If the predator continues to torment you, shoot a gun or stab with a knife.

# Common Viper

# Common Viper

- Where does it live?

The common Viper is found in meadows, forests, swamps, sandy semi-deserts and on the shores of lakes.

- How dangerous is Common Viper?

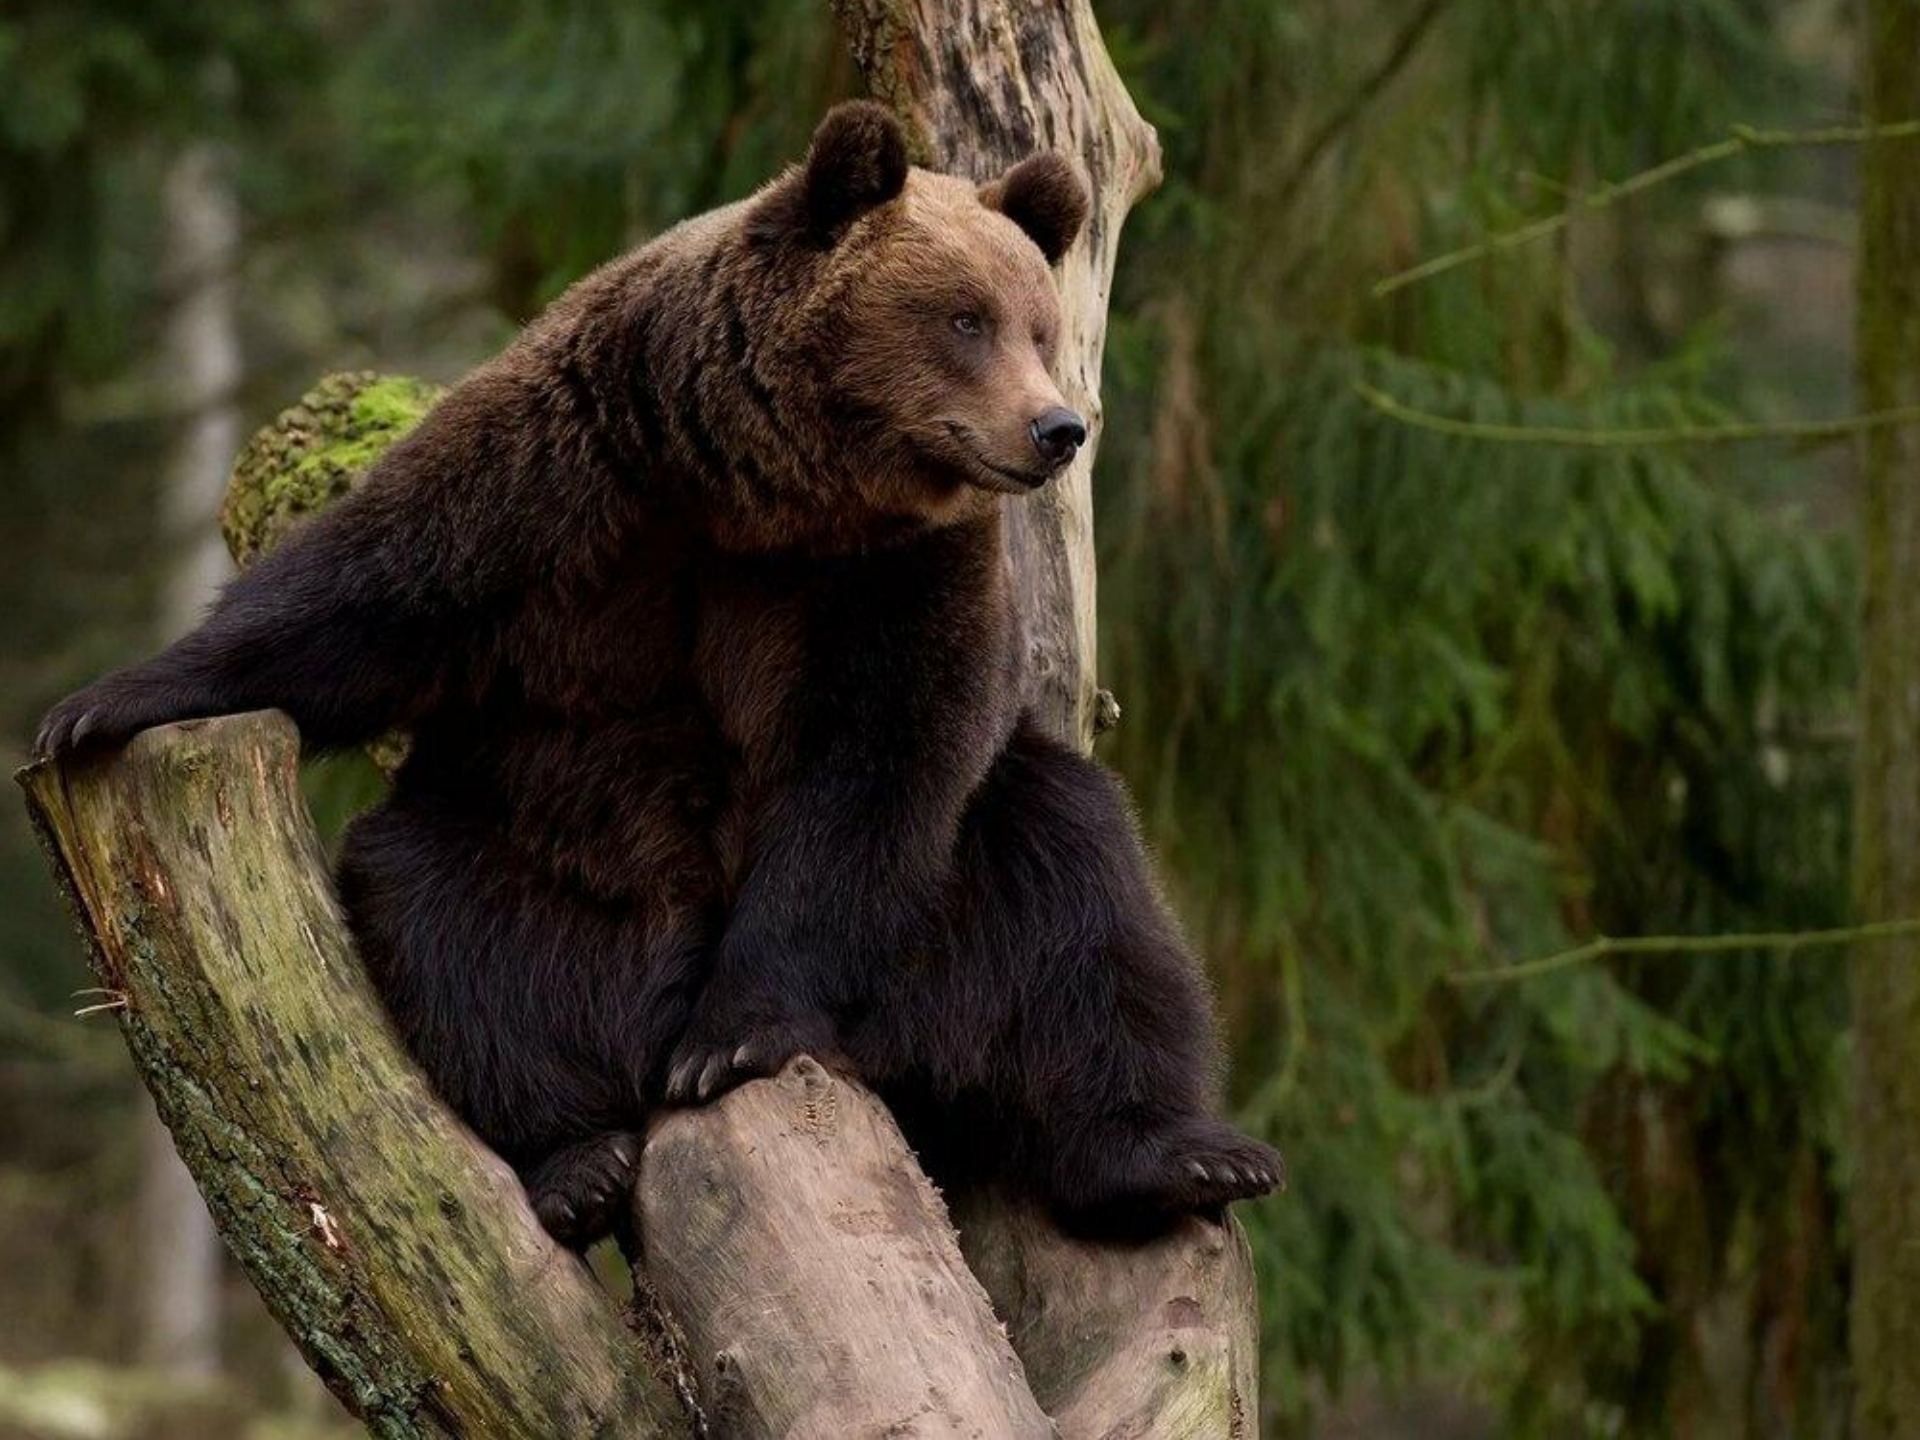

Although the snake looks angry and aggressive, it is actually very shy and peaceful. It will attack you just if it feels threatened. Common Viper's poison destroys human's red blood cells.

# Common Viper

- How can you protect yourself?

Meeting with it is always unexpected, and if you step on it, the attack can not be avoided.

Амурский тигр

Гадюка обыкновенная

Европейский бурый медведь

Северный олень

+ серый журавль
