

Space Hotel

Have you ever dreamt of making your own
travel to the space?
Is it a fantastic and unachievable dream,
or the fantasy **may come true**?

There will be four seven-berth cabins, huge illuminators with a wondrous sight of the space and our planet.

Just like in a real hotel, all the necessary comfortable conditions will be made. Night sleep will be able in rotate-any-angle-beds. With zero-gravity sleeping upside down is not disturbing.

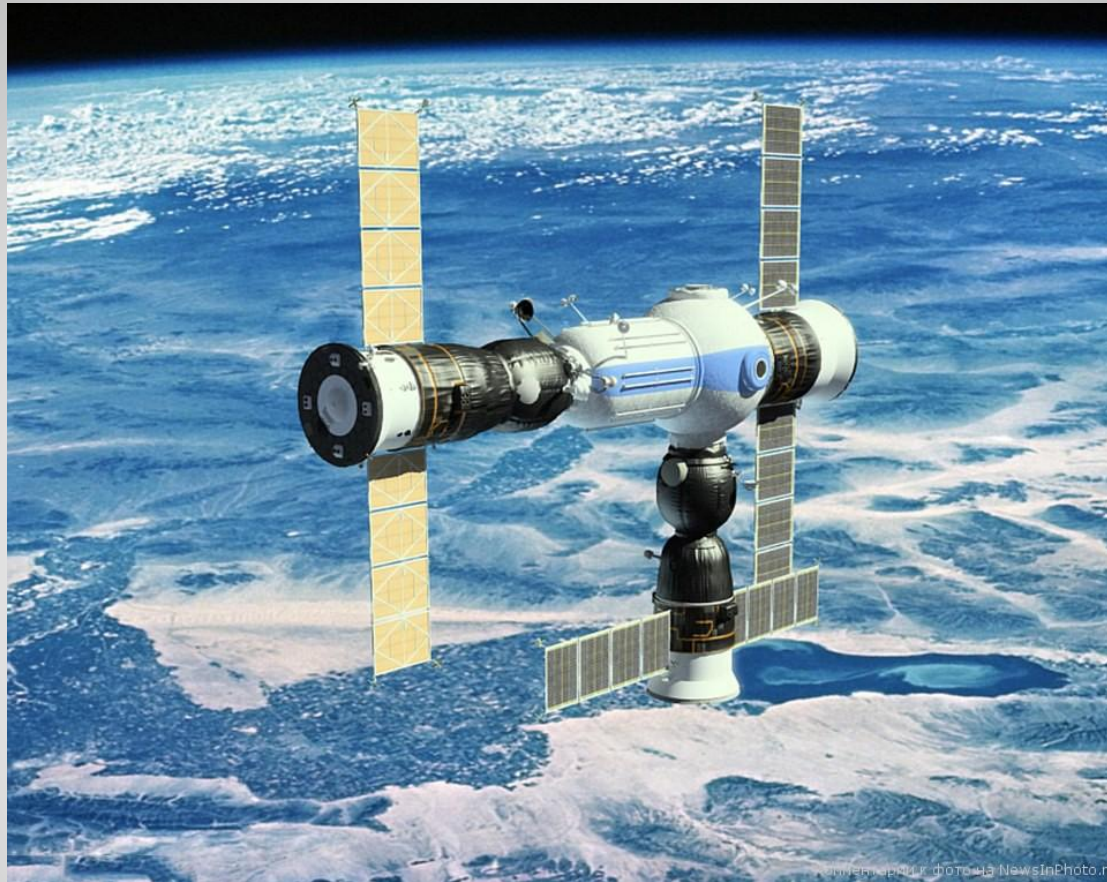

All the meals will be cooked on the Earth and then sent frozen to be used in a microwave oven. As for the drinks, ice tea, mineral water and juices will be available. Of course, alcohol is strongly prohibited.

Alike the ISS, where the astronauts wash with a sponge, here one can take a real shower.

Accumulative water-heaters will be placed there. The bathrooms will be waterproofed with special air circulation system to gather the water back.

All the used water and air will be filtrated and reused in this circulation system..

Such a travel isn't a cheap thing. Five day of space life will cost 165.000\$. In addition, the trip itself by "Souz" rocket is about 830.00\$.
