Task Maker

Mukhamadiyev Sayat 4A-04

What is Task Maker?

- The aim of web service that includes subservices is providing various services to the users in order to save the life of resources particular time, energy, etc. Accordingly, except money.

Aims

- Simplifying life busy people
- Creating a Web service to provide various services
- Exchange of financial resources to the resource of time
- Quality of work
- Care professionals in the various cases

Reason for choosing

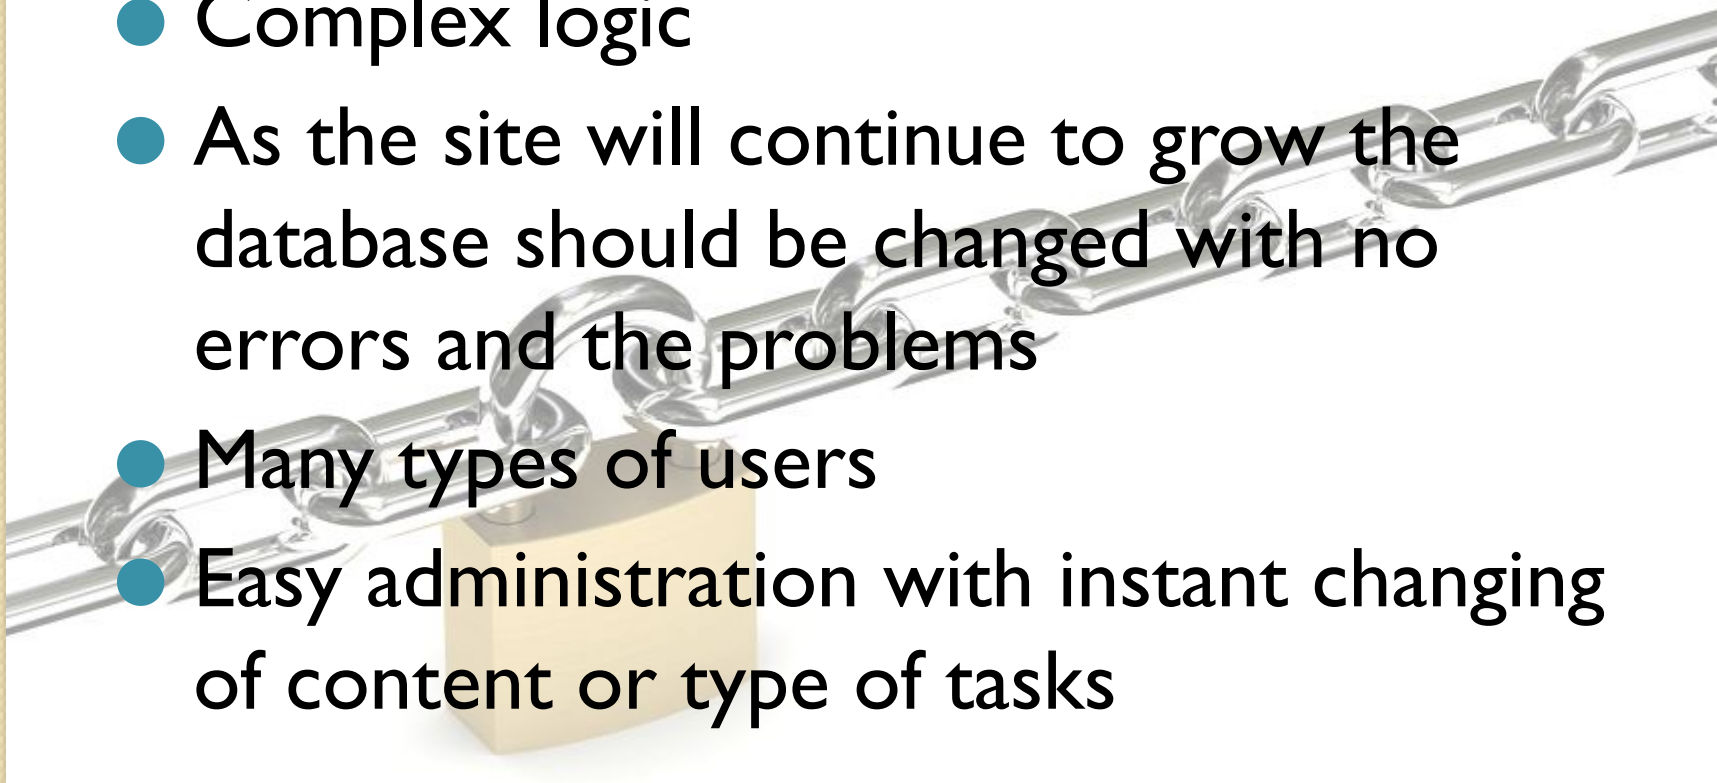
- Internet sells everything except the time\
- Conversely all services, social networks, games, waste our time
- Time the most expensive resource
- Some people are not able to perform certain tasks, or spend it on a lot longer than prepared worker

Technology

- Code Igniter - is a powerful PHP framework with a very small footprint, built for PHP coders who need a simple and elegant toolkit to create full-featured web applications.
- As diploma work is the evaluation of student educated at the university I chose PHP, as it consist all learned programming skills and knowledge

Database

- Is one of the hardest parts of the project
- Complex logic
- As the site will continue to grow the database should be changed with no errors and the problems
- Many types of users
- Easy administration with instant changing of content or type of tasks



Example

Extra

- Easy to learn site
- Selection of task in few minutes
- Different types of payment
- Warranty of implementation task
- Different connections with client
- Online help/faq

THE END!
