THE GIANT PANDA

THE EXTINCTOIN

*The most popular reason of panda*s extinction is defect of habitats, where they can live. Many forests were damaged by outlaws! That is why pandas are live in mountains of China. They are never go to the people*s living sides, so they cannot get any help of people...

Panda*s favourite dish is bamboo! But it is a fact, that the plants of bamboo are dying every 40 - 120 years!!!! In the past, pandas moved the place, where there were more their eating, but now that places surrounded by villages and other living sides, so pandas can*t move so much as they could! Satatistics said, that in 2000, all pandas would be destroed, but now is 2012 and bamboo bears have fight for their being, yet

* But there is one organisation, which is protecting animals every day and every hour! The simbol of WWF is Giant Panda, so the organisation always will protect animals, notably PANDAS - GIANT PANDAS!!!!!!! WWF - the global enviroment network, works hard to protect the endangeroud spieces of animals. You can watch more on their website - www.wwf.org!))))))))))
