

We and the environmental

Environmental contamination problems

Our planet not always was such dirty. There were times when all around shone cleanliness.

precisely this when it was our environment

Once, everything
around us was very
clean.

Clean rivers, sea, air,
streets, always
delighted us

Really looking at this
beauty, we are sad?
=))

But now we observe the such:

Garbage-it a problem planetary to scale

The problem with garbage is that it's a sum zero game. Garbage has to go somewhere but nobody wants it in their backyard. It's as if trash is deposited in the garbage can and somehow it's supposed to disappear into some magic black hole. Problem is, there is no black hole. There isn't even room for any more landfill . What was once thought to be a progressive solution-incinerating garbage - has become a major point of contention.

The environmental contamination reasons:

- ❖ Ferrous metallurgy manufacturing
- ❖ Influence of the person on biosphere
- ❖ A considerable quantity of a waste
- ❖ The catastrophic reasons
- ❖ Nuclear power station
- ❖ Cars' gases

Global problems include:

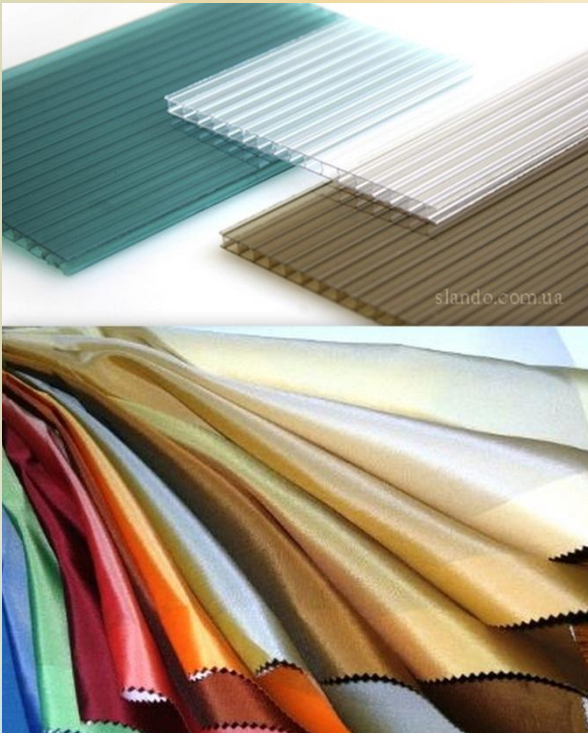

- Air pollution
- Water pollution
- Deforestation
- Radioactive contamination

*That though as that the help to
our planet to escape from
garbage, have created system of
recycling of a waste.*

Recycling in this or that scale of such materials, as **glass**, aluminum, **fabrics** and various kinds of **plastic** is most extended.

The international symbol of recycling – Moebius's tape.

We dream of that our Planet has been filled by cleanliness, light, love and care, we want pure environment for our Earth. Daily the life we make changes in the nature.

Let's clean together!

**Besides, to direct
cleanliness-it's very
funny :)**

People, protect our Earth!!!

Thank you for attention
